CYTOLOGY PAP SMEAR (GYNEC CYTOLOGY)

TEST DESCRIPTION	RESULT	REF. RANGE	UNIT
Specimen Adequacy	Adequate for evaluation		
General Categorization	Epithelial cell abnormality		
Squamous Cells	absent		
Endocervical Cells	absent		
Other Cell Types	absent		
Microorganisms	absent		

Interpretation:

General Categorization	Interpretation
Negative for intraepithelial lesion or malignancy	No abnormal cells were detected. This is a normal result.
Epithelial cell abnormality	Abnormal cells were detected. This may indicate a precancerous or cancerous condition, or it may be due to other factors such as infection.
- Atypical Squamous Cells of Undetermined Significance	Abnormal cells were detected, but it is unclear if they are precancerous. Further testing may be necessary.
- Low-Grade Squamous Intraepithelial Lesion (LSIL)	Mild changes were detected in the cells. This may indicate a precancerous condition. Further testing and/or monitoring may be necessary.
- High-Grade Squamous Intraepithelial Lesion (HSIL)	Significant changes were detected in the cells. This may indicate a precancerous or cancerous condition. Further testing and/or treatment is necessary.
- Squamous Cell Carcinoma	Cancerous cells were detected. Treatment is necessary.
- Atypical Glandular Cells	Abnormal cells were detected in the glandular cells of the cervix. Further testing and/or treatment is necessary.
Unsatisfactory	The sample collected was inadequate for evaluation, and the test will need to be repeated.
