BIOCHEMISTRY SERUM CREATININE

TEST DESCRIPTION	RESULT	REF. RANGE	UNIT
serum creatinine	0.8	0.6 - 1.3	mg/dl

Interpretation:

1. If the serum creatinine level is within the normal range, it typically indicates that the kidneys are functioning normally.
2. If the serum creatinine level is above the normal range, it may indicate impaired kidney function or kidney disease. However, elevated creatinine levels may also be caused by other factors, such as dehydration, high protein intake, or certain medications.
